

On the Subject of 3D Lights Out

Just be glad it's not 4D Lights Out.

- Press the buttons to switch off all the lights. This module will never strike.
- The three grids of buttons represent layers of a $3 \times 3 \times 3$ cube. From left to right, they are the top, middle, and bottom layers respectively.
- When pressed, a button will invert the lit state of the button itself and the lit state of the adjacent buttons in the six major cardinal directions.
